Is your Genevac EZ-2 solvent evaporator a match for some of the tough tasks you may have in mind these days?

Would you like it to be able to evaporate solvents with boiling points above 165 perhaps? What about enhancing its solvent recovery, improving final drying of stubborn samples, or even being able to undertake fast lyophilisation of HPLC fractions?

These challenging requirements are all within the capability of the new EZ-2 Elite and it is now possible to upgrade existing EZ-2 Plus models to the same level of specification. Owners of other versions can take advantage of a special part-exchange scheme, which is running during the Elite launch period.

For further information about the EZ-2 Elite, or to order a brochure, go to www.genevac.com

To discuss upgrading your existing EZ-2 Plus, or to find out more about the EZ-2 part-exchange scheme, call us or contact your local Genevac office.
